Empathy Map

Create an empathy map to understand the user of the ServiceNow data import process from four perspectives: what they Say, Think, Do, and Feel. This helps the team design a simple and effective solution for importing spreadsheet data using Transform Maps.

Persona / User: ServiceNow Administrator / HR Data User

SAYS • I want to import employee data easily. • I need the spreadsheet data to map correctly. • I want to avoid errors during data import.	THINKS • Is the spreadsheet data in the correct format? • Are all fields mapped to the correct ServiceNow fields? • Will the Transform Map identify and import the records correctly?
DOES • Prepares employee data in a spreadsheet. • Uploads the spreadsheet into ServiceNow. • Creates and runs a Transform Map to import the data.	FEELS • Confident when the data imports successfully. • Concerned about incorrect or missing records. • Satisfied when the import process is quick and accurate.

PERSONA NAME

ServiceNow Administrator / HR Data User
