

Import Data Using Transform Maps (Spreadsheet)

Problem-Solution Fit

Date	02 October 2026
Team ID	SWTID-2026-5675
Project Name	Import Data Using Transform Maps (Spreadsheet)
Maximum Marks	5 Marks

Problem-Solution Fit Canvas

This canvas describes the users, problems, triggers, emotions, limitations, existing approaches, and the proposed solution for importing spreadsheet data into ServiceNow using Import Sets and Transform Maps.

1. CUSTOMER SEGMENT(S) [CS] ServiceNow administrators, developers, trainees, and teams who need to import bulk spreadsheet data.	6. CUSTOMER LIMITATIONS [CL] Limited knowledge of Import Sets and Transform Maps; spreadsheet formatting errors; field-mapping issues; limited ServiceNow access.	5. AVAILABLE SOLUTIONS – PROS & CONS [AS] Manual record entry – simple but time-consuming. Import Set + Transform Map – supports bulk import and field mapping, but requires correct configuration. Scripts/APIs – flexible but require more technical knowledge.
2. PROBLEMS / PAINS + ITS FREQUENCY [PR] • Entering many records manually takes time. • Spreadsheet data may not match ServiceNow field formats. • Incorrect mapping can cause failed or incomplete imports. • These issues occur whenever bulk spreadsheet data must be uploaded.	10. YOUR SOLUTION [SL] Use ServiceNow Import Sets and Transform Maps to import spreadsheet data into the required target table. Process: 1. Prepare the spreadsheet. 2. Upload the file through Import Set. 3. Create/select the Import Set table. 4. Create a Transform Map. 5. Map source fields to target fields. 6. Run the Transform. 7. Verify the imported records.	7. BEHAVIOR + ITS INTENSITY [BE] Users prefer a faster bulk-import method and usually rely on spreadsheets. The need is high when many records must be created or updated. CHANNELS OF BEHAVIOR [CH] ONLINE • ServiceNow web interface • Spreadsheet upload OFFLINE • Spreadsheet preparation and validation
3. TRIGGERS TO ACT [TR] • Need to upload bulk records. • New spreadsheet data is received. • Manual entry becomes impractical. • Existing records need to be updated from spreadsheet data.		
4. EMOTIONS – BEFORE / AFTER [EM] Before: Confusion, repetitive work, and concern about data-entry errors.		

After: Faster processing, better consistency, and confidence that records are mapped correctly.		
---	--	--

Expected Outcome

The solution should reduce manual data entry and allow spreadsheet records to be imported into ServiceNow accurately through a configured Transform Map. The imported records should be verified in the target table after transformation.
