Project Title	Import Data Using Transform Maps (Spreadsheet)
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposed solution focuses on importing spreadsheet data into ServiceNow using Import Sets and Transform Maps. The process maps source spreadsheet fields to target table fields, applies data transformations, validates records, and loads accurate data into the ServiceNow platform.

Project Overview	
Objective	To import spreadsheet data into ServiceNow efficiently by using Import Sets and Transform Maps, ensuring that source data is correctly mapped, transformed, validated, and inserted or updated in the target table.
Scope	The project covers spreadsheet preparation, data import through Import Sets, creation of a Transform Map, field mapping, transformation rules, data validation, and successful loading of records into the target ServiceNow table.

Problem Statement	
Description	Manual entry of large amounts of spreadsheet data into ServiceNow can be time-consuming and may introduce data-entry errors, inconsistent formats, and duplicate records.
Impact	An automated import process reduces manual effort, improves data accuracy and consistency, and makes it easier to manage large volumes of records in ServiceNow.

Proposed Solution	
Approach	Use a ServiceNow Import Set to upload the spreadsheet, create a Transform Map between the import set table and the target table, map corresponding fields, apply required transformations, and run the transform to load the data.
Key Features	• Spreadsheet-based data import. • Import Set and staging-table processing. • Transform Map for source-to-target field mapping. • Field transformations and data validation. • Insert/update handling and duplicate prevention. • Import results and error-log verification.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware	Computing Resource	Laptop/Desktop with stable internet connection
Hardware	Memory	Minimum 4 GB RAM
Hardware	Storage	Minimum 10 GB free space for

		spreadsheet files and project data
Software	Platform	ServiceNow instance
Software	Tools	Import Sets and Transform Maps
Software	Spreadsheet	Microsoft Excel / Google Sheets / CSV
Development Environment	Browser	Google Chrome / Microsoft Edge
Data	Source	Spreadsheet/CSV containing import records
Data	Target	ServiceNow target table

Implementation Steps

1. Prepare the spreadsheet with valid column headings and records.
2. Navigate to ServiceNow Import Sets and upload the spreadsheet file.
3. Select the appropriate import options and load the data into the Import Set table.
4. Create a Transform Map and select the source Import Set table and target ServiceNow table.
5. Map source spreadsheet fields to the corresponding target fields.
6. Configure field mapping, coalesce options, and transformation logic where required.
7. Run the Transform Map to process and load the records.
8. Verify inserted/updated records in the target table and review any import errors or ignored rows.

Expected Outcome

The spreadsheet data should be successfully imported into the selected ServiceNow target table through an Import Set and Transform Map, with correct field mapping, validated records, reduced manual effort, and clear import-status/error results.
