

SOLUTION ARCHITECTURE

Date	02 October 2026
Team ID	SWTID-2026-5675
Project Name	Import Data Using Transform Maps (Spreadsheet)
Maximum Marks	5 Marks

Solution Architecture Diagram

This architecture shows how spreadsheet data is imported into ServiceNow using Import Sets and Transform Maps. The Transform Map maps source spreadsheet fields to the target table fields.

Presentation / Client Layer ServiceNow Import Set UI • Upload Spreadsheet / CSV
API / Import Interface Import Set API (optional) • ServiceNow platform interface
Authentication&Access ServiceNow login • Roles • ACLs
Core Logic Service Import Set Table • Transform Map • Field Mapping • Transform Scripts
Data Validation Source field validation • Data type / mandatory field checks • Error handling
Data / Storage Layer Import Set Table → Target Table (for example, Incident / User / Asset)
External Data Source Spreadsheet / CSV file containing source records

Data Flow

Spreadsheet/CSV → Upload to ServiceNow → Import Set Table → Transform Map → Field Mapping&Validation → Target Table → Imported Records

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation / Client Layer	Allows the user to upload the spreadsheet and start the import process.	ServiceNow UI / Import Set

Import Set	Temporarily stores spreadsheet records before transformation.	ServiceNow Import Set Table
Transform Map	Maps source fields to target fields and controls how records are transformed.	ServiceNow Transform Map
Transform Scripts / Validation	Applies custom transformation logic and validates source data when required.	ServiceNow Scripts / Field Mapping
Target Database Table	Stores the final transformed records in the required ServiceNow table.	ServiceNow Database / Target Table

Short Explanation

- 1. User prepares the required data in a spreadsheet or CSV file.
- 2. The file is uploaded into ServiceNow through the Import Set interface.
- 3. The data is stored temporarily in the Import Set Table.
- 4. The Transform Map maps source fields to the corresponding target fields.
- 5. After transformation and validation, the records are inserted into the target ServiceNow table.
