

Scalability & Future Plan

Date	02 October 2026
Team ID	SWTID-2026-5675
Project Name	Import Data Using Transform Maps (Spreadsheet)
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the spreadsheet import solution using ServiceNow Import Sets and Transform Maps can be scaled for larger data volumes, more users, and future enhancements. It also defines a roadmap for improving performance, storage, security, and reporting as the project grows.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address
1	Large spreadsheet files may take longer to upload and transform.	Higher processing time for bulk imports.	High
2	Manual spreadsheet preparation can cause duplicate or incorrect data.	Data quality issues in the target Employee table.	Medium
3	Basic import process may provide limited monitoring for failed records.	Errors may require manual checking and correction.	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Designed for normal administrator/import-user activity.	Use role-based access and scheduled imports to support more users.
2	Data Storage	Employee records are stored in the target ServiceNow table.	Use data archiving/retention rules and optimized table management for larger datasets.
3	Performance	Transform Maps process spreadsheet data into the target table.	Use batch/scheduled imports, field mapping optimization, and coalesce fields to reduce duplicates.
4	Security	Import and target data are controlled by ServiceNow access permissions.	Strengthen ACLs, role-based access, validation, and audit logging for import operations.

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Automate scheduled spreadsheet imports and improve validation/error handling.	1–3 months	Less manual effort and fewer import errors.
Phase 3	Add advanced monitoring, import dashboards, and data-quality reports.	3–6 months	Better visibility into successful and failed records.
Phase 4	Integrate additional data sources and optimize large-volume imports.	6–12 months	Supports future growth and higher data volumes.
